ABSTRACT OF THE DISCLOSURE

There is provided an enterprise system constructing method capable of supporting to rapidly construct enterprise systems to share and reuse the whole structure of the systems, and of flexibly and easily changing and extending the systems.

A framework 10 includes: a framework 11 which defines the basic attribute and behavior of an enterprise system; frameworks 12, 13 and 14 which inherit the framework 11 and which define the basic attribute and behavior suitable for various executable environments; and a framework for integrating systems 15 which inherits the framework 11 and which defines the basic attribute and behavior relating to combinations of the frameworks 12, 13 and 14. Each of the frameworks 11, 12, 13, 14 and 15 is inherited and materialized, and systems prepared from the frameworks 12, 13 and 14 are combined so as to have a tree structure, the vertex of which is an integrating system prepared from the frameworks for integrating systems 15.
